

Project Design Phase Proposed Solution Template

Date	14-07-2026
Team ID	
Project Name	EduGenie
Maximum Marks	

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Students, self-learners, and educators face fragmented learning resources, slow doubt resolution, no easy way to self-assess understanding, and no personalized guidance on what to study next.
2.	Idea / Solution description	EduGenie is a lightweight AI-powered educational assistant, built with FastAPI and a responsive HTML/CSS/JS frontend, that provides instant question answering, simplified concept explanations, AI-generated quizzes, text summarization, and personalized learning path recommendations through a single interface.
3.	Novelty / Uniqueness	Unlike single-purpose study apps, EduGenie unifies five core learning capabilities in one lightweight tool, optimized to run efficiently on resource-constrained hardware such as the Mac M1, making advanced AI-assisted learning accessible without heavy infrastructure.
4.	Social Impact / Customer Satisfaction	Improves learning outcomes and confidence by giving students and self-learners instant academic support, encourages self-assessment habits through quizzes, and helps educators save time preparing practice material.
5.	Business Model (Revenue Model)	Envisioned as a free/open educational tool for personal learning and academic projects, with potential future tiers for institutions (e.g., educator dashboards, bulk quiz generation, or classroom analytics).
6.	Scalability of the Solution	The modular FastAPI backend allows new modules (e.g., voice input, progress analytics, multi-language support) to be added independently, and the lightweight architecture allows deployment from personal devices up to small institutional servers.
